Possible Outcomes of Investing in the Fund

Refer to "Risk Factors" in the "Information In Relation to the Fund" section of the Fund's Master Prospectus.

Investment involves risk and different types of unit trust funds carry different levels of risk. The value of the Fund and its distributions (if any) may rise or fall. These risk factors, among others, may cause you to lose some or all of your investment.

KEY RISKS

WHAT ARE THE KEY RISKS ASSOCIATED WITH THE FUND?

Refer to "Risk Factors" in the "Information In Relation to the Fund" section of the Fund's Master Prospectus.

Countries or Foreign securities risk

The Fund invests in a Target Fund that is domiciled in Luxembourg and also invests in securities listed outside Luxembourg. Any changes in the economic fundamentals, social and political stability, currency movements and foreign investments policies in these foreign countries may have an impact on the prices of the securities that the Target Fund invests in and consequently may also affect the Fund's NAV.

Currency risk

As the investments of the Fund may be denominated in currencies other than the base currency, any fluctuation in the exchange rate between the base currency and the currencies in which the investments are denominated may have an impact on the value of these investments. Investors should be aware that if the currencies in which the investments are denominated depreciate against the base currency, this will have an adverse effect on the NAV of the Fund in the base currency and vice versa. Investors should note that any gains or losses arising from the fluctuation in the exchange rate may further increase or decrease the returns of the investment.

The impact of the exchange rate movement between the base currency of the Fund and the currency of the underlying investments may result in a depreciation of the value of the investments as expressed in the base currency of the Fund.

WHAT ARE THE KEY RISKS OF THE TARGET FUND?

Refer to "Risk Factors" in the "Information In Relation to the Fund" section of the Fund's Master Prospectus.

Security risk

Adverse price movements of a particular security invested by the Target Fund may adversely affect the Target Fund's net asset value.

Fund management of Target Fund risk

While the Manager will exercise due skill and care in selecting the Target Fund, it does not have control over the management of the Target Fund and there is no guarantee that the investment objectives will be met. This may result in Unit Holders suffering losses in their investments in the Target Fund.

Errors in calculation of the net asset value of the Target Fund's risk

There is a possibility there are errors in calculation of the net asset value of the Target Fund. In the event such errors occur, the net asset value of the Target Fund will be affected hence, the Target Fund will comply with the rules set forth in the relevant regulatory provisions applicable to the Target Fund.

Liquidity risk

Liquidity risk here refers to two scenarios. The first scenario is where the allocated liquidity of the Target Fund is insufficient to meet redemption needs. The second scenario is where the investments in the Target Fund are thinly traded. Should the investments in the Target Fund be thinly traded, this may cause the Target Fund to dispose the investment at an unfavourable price in the market and may adversely affect investors' investment.

Countries or Foreign securities risk

This risk is associated with investments in securities listed or domiciled in countries other than the country of domicile. Any changes in the economic fundamentals, social and political stability, uncertainty or changes in countries' official currencies, currency movements and foreign investments policies in these countries may increase the volatility in asset values, liquidity and default risk which may have an impact on the prices of the securities that the Target Fund invests in and consequently may also affect the net asset value of the Target Fund.

Currency risk

This risk is associated with investments denominated in currencies different from the base currency of the Target Fund. As the Target Fund is denominated in EUR, the underlying investments may be denominated in its local currency. The performance of the Target Fund may be affected by movements in the exchange rate between the local currency and EUR.

Emerging market risk

Potential investors should be aware that investments in emerging markets may involve a higher degree of risk than investments in developed markets.

Initial Public Offerings risk

The Target Fund may invest in initial public offerings, which frequently are smaller companies. Such securities have no trading history and information about these companies may only be available for limited periods. The prices of securities involved in initial public offerings may be subject to greater price volatility than more established securities.

Smaller companies risk

The Target Fund which invests in smaller companies may fluctuate more in value than investments in larger companies. Smaller companies may offer greater opportunities for capital appreciation than larger companies, but may also involve certain special risks.

Technology related company risk

Investments in the technology sector may present a greater risk and a higher volatility than investments in a broader range of securities covering different economic sectors.

Please be advised that if you invest in Units through an Institutional Unit Trust Adviser (IUTA) which adopts the nominee system of ownership, you would not be considered to be a Unit Holder under the Deed and you may, consequently, not have all the rights ordinarily exercisable by a Unit Holder (for example, the right to call for a Unit Holder's Meeting and to vote thereat and the right to have your particulars appearing in the register of Unit Holders of the Fund).
